

Why level your ground?

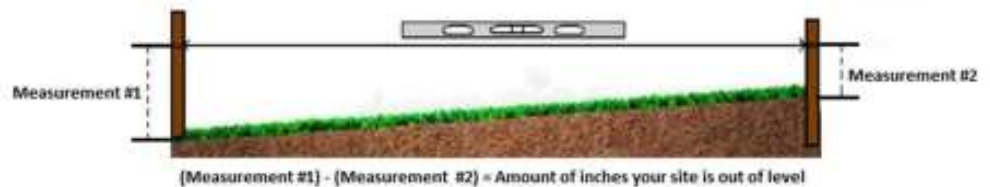

- A level foundation accounts for 50% of the functionality of your new building!

We want to provide you with an easy two-step guide on how to ensure that your site is prepared for your new building project.

- 2) First you should mark all four corners of your building site using a wooden or metal stake. Run a string from corner to corner outlining the perimeter of your site.

- 1) Carefully measure each corner to verify the measurement from the string to the ground and compare. All measurements should be within 3" of each other to ensure a fast and trouble free installation and avoid additional labor fees.

At C&H Carports, we want to make sure we provide you with a great building product and the most pleasant building experience.

Our support staff is always available to answer any questions regarding site preparation in order to make sure that you get the best functionality out of your new building project!
